If what you really want is a printer to output a lot of text documents for business, etc., you probably still want to look into laser printers. If you want that capability, you wont find a laser model for less than ten times the cost of the MFC6490CW. Bear in mind, this printer really is very big. Its almost as big as a heavyduty office printer. It wont share a desk with your monitor and keyboard comfortably, and if you use a laptop it will loom over you like a monolith so make sure you have space for it. Setup was easy enough, although you may need to be a little savvy to successfully share the printer with several PCs over a network. I found it was safest to assign a static IP address to the printer and manually configure each PC to search for it at that address, rather than relying on the automatic setup. Another reviewer said you cant use wireless and wired networking at the same time. To clarify, the printer will only use one network interface at a time if you enable the wireless networking on the printer it will disable the Ethernet and vice versa. But it makes no difference; the point is to use whichever interface is most convenient for you. If you plug the printer directly into the Ethernet port on a wireless router, you WILL still be able to access the printer from wireless devices. Likewise, you wont need to buy a wireless card for your desktop PC if you set up the printer on WiFi.

Your wireless router will automatically bridge the wired and wireless networks. The printer is just giving you options. As for print quality, sorry folks, text output is NOT as good as a laser. Its not as fast, its not as sharp, its not as dark, its not as crisp bottom line, a laser printer is going to yield nicerlooking text documents. The again, text quality is very readable, and normalquality output on plain paper is quick enough for my needs. I realized that most of my prints are for my own files, or for me to mark up with a pen. Who am I trying to impress. Those of us who can still remember the days of dotmatrix printers should have no complaints. I would consider prints at normal quality mode to be fully acceptable for business use. The text becomes very sharp indeed if you use highquality inkjet paper and one of the printers photo modes, but thats too slow and expensive to be practical. I was pleasantly surprised by the graphics output, which I found to be rich, smooth, and clear. Outputting photos to plain paper showed noticeable banding, but thats to be expected. On the other hand, I printed out a document that had lots of areas of flat color and lots of gradients onto highquality 36 pound matte inkjet paper, and on that job I noticed ZERO, repeat ZERO banding in either the gradients or the flat areas. If anything, the colors came out a little too dark and saturated, but I suspect that I used an overly optimistic print mode for the particular paper stock I had on hand. I have yet to try printing photographs at maximum quality onto glossy photo stocks, but I have no reason to doubt the quality of the output. I printed out a page of text on plain paper and on 36pound inkjet paper, then threw a bunch of water onto the pages. The plainpaper sheet did seem to blur a bit, but not as much as I expected. Black ink seemed to survive the test well, while colors bled quite a lot. On the heavy ink jet paper, however, there was almost no change once the inks dried.

I would actually include the sheet that got wet in with other pages in a presentation; it survived that well. Laser printers still have the advantage if you plan to take your prints out in the rain, but prints from this inkjet are no sissies. As others have noted, the printer isnt smart enough to know which kind of paper is in which tray. You need to configure it yourself, either on the panel on the front of the printer or via the configuration software. Thats a small price to pay, however, and an example of the many minor compromises that Brother has made to keep the price of this printer at rock bottom. More annoying is the fact that theres no easy way to feed a single envelope without emptying out a paper tray. There is no automatic duplex scanning, copying, or printing, but I have never owned a printer that would do these things. Unlike others, the automatic document feeder ADF worked smoothly for me. The scanner was a treat. I had a lowcost tabloid scanner already Mustek A3 USB but this Brother scanner is far better. Its fast, even when scanning over the network. And its clever you dont even have to initiate a scan on your PC. You can put a document onto the scanner, push the button, and have the scanner send the output TO your computer. On a network, you can even pick WHICH computer to send the scan to. The included OCR software read a twopage document with zero errors. The only minus Ive noticed is that the scanner drivers dont come with any kind of descreening filters, so youll need thirdparty software to clean up scans from magazines or other fourcolor images. On the whole, there are probably better choices if all you want to do is print lettersized pages, but if youre in the market for tabloid printing or scanning, this device really cant be beat. I believe this printer would serve any small business well.

One more note Brother has actually included highcapacity inkjet cartridges with this printer, rather than the halffull cartridges you get from some manufacturers.The print quality is there, the features, good inks, etc but the haphazard printer drivers and the dictatorial printer software make this tool a sore spot in an otherwise complete home computing experience. On our Windows Vista desktop no matter how we set up the print drivers the Brother printer will not send a print job through until reboot. This occurred somewhere in 2010 when MSFT updated Vista and Brother didnt update their driver properly. This essentially removed one of our home systems from ever being able to print aside from the few random prints that emerge after a monthly reboot. This seems like this would be a good machine but the quirks and poor software have made owning this a frustrating experience and regrettable purchase. Please try again later. PCM2 4.0 out of 5 stars Then how could I say no. If

Please try again later. ls r. 4.0 out of 5 stars Here are some comments I have after using this for almost a year This does NOT come with an USB cable. Order one off amazon if youre planning to connecting it so it arrives at the same time. When the printer runs out of an ink cartridge, it will not print in any color. I have yet to have a paper jam, even when using glossy and semigloss paper. This printer does not print side by side, which I knew about when I purchased it. I now wish I had spent a little more on the version that does do this.

While it copies from a feeder, it does not print from one, which would have been very convenient for doing fast prints of things like envelopes. It took me a very long time to figure out how to scan a document 11x17. It does do as advertised, you just have to tweak the settings. Overall, the scans are okay if you are not are only scanning documents. If you are an artist, I would recommend getting a real scanner because the results from this are rather poor. Very low contrast and whitewashed images, no matter how you tweak it. The software for this is useless and insists on booting up every time you connect the machine. I dont know why I installed it in the first place.The wireless network seems to not want to work in a secured network. I want to mention that I did not find this machine to be noisier than other small ones Ive previously owned. It does make some noise, but not enough to annoy me or wake the cat up. Overall, this is a good printer for the price. It is not in heavy use so i expect to have it for a long time. Its easy to use, albeit a little slow and it has been frustration free for me other than the installation, so I would recommend this to anyone looking for and affordable printer than can do almost all with decent quality. If you are looking for a SUPER FAST, SILENT, SIDESIDE PRINTING, FLAWLESS SCANNING and SMALL device this is not the choice you want to make. 2014 UPDATE EDIT I have had this machine since 2010. I took a gamble when I bought it, because I had it shipped overseas and it would have been impossible to return it if it had ended up being a dud. At this point I thought I should make an update. So far, the machine has not given me any problems. Its a very solid, reliable product. I printed my architecture thesis on this. 4 books. 300 pages each, side by side. It took quite a bit of planning around but I managed to make it work. Again, I still wish I had bought the sidebyside print version.
