1. Complete the following Lab Report with the questions and submit it by June 15, during your lab session for grading. Use reports in the **Lab Report** sub-area under syllabus.
2. Do NOT change the format of the report margin, size of letters, etc. using the right margin tool. Your report will be discarded if you alter the Lab Report "Template".
3. Please include "Date" column entry space for each question in German.
4. Type your responses in Times New Roman. 12pt font size is indicated.
5. You may draw something by hand, but only if you can show how to reproduce it using a computer. Other hand-drawn stuff will not be graded.

Year	1990	1991	1992	1993	1994	1995	1996
1990	1.00	1.00	1.00	1.00	1.00	1.00	1.00

The purpose of this study was to synthesize biodegradable poly(L-lactide) porous scaffold (sponge) and demonstrate its ability to act as the whole structure template that can be produced. This component can be used in the development of a new type of porous poly(L-lactide) that is biodegradable and biocompatible. A preliminary study was conducted to determine the effect of the amount of water on the synthesis of poly(L-lactide) sponges. The results showed that the amount of water used in the synthesis of poly(L-lactide) sponges was 10% (v/v). This study also showed that the amount of water used in the synthesis of poly(L-lactide) sponges was 10% (v/v). This study also showed that the amount of water used in the synthesis of poly(L-lactide) sponges was 10% (v/v). This study also showed that the amount of water used in the synthesis of poly(L-lactide) sponges was 10% (v/v).

EXPERIMENT 7 (Organic Chemistry II) Pahlavan / Cherif
Aldol Condensation - Synthesis of Dibenzalacetone

8.2. Parameter Estimation

Defect structure: $\langle 111 \rangle$ and $\langle 112 \rangle$
 Anisotropy: $\epsilon_{11} \neq \epsilon_{22} \neq \epsilon_{33}$
 Elasticity: Polymorphic
 Thermodynamic stability: $\langle 111 \rangle$ and $\langle 112 \rangle$ are stable
 Melting: Polymorphic, $\langle 111 \rangle$ and $\langle 112 \rangle$

Keywords: The objectives of this experiment were to learn about neuroendocrine systems of olfactory and taste.

Introduction

Like the Claisen reaction, the Aldol Condensation is an extremely useful carbon-carbon bond-forming reaction in organic chemistry. Under the reaction conditions in the experiment, two equivalents of aldehyde will react.

These products are α -[3-hydroxypropyl]hydrocarbons for β -hydroxypropenones. This reaction is much more selective in organic synthesis for α -C-C bonds, and more frequent in nature, in every case, the product results from the addition of an enolizable α -C-H bond to the carbonyl of the ketone in a manner such as to give that the number of the first fragment attached to the carbonyl carbon of the second.
