Instead, our system considers things like how recent a review is and if the reviewer bought the item on Amazon. It also analyzes reviews to verify trustworthiness. Please try again later. Geoffrey Fortier 5.0 out of 5 stars When this one came up on Amazon I thought there must be something wrong with it, but after some research it was actually a pretty respectable model. It arrived promptly and in perfect. A few things to know. This version is meant to be mounted on a wall or ceiling, it is not freestanding. I was looking for the former, so I was totally satisfied. Its pretty light. I assure you it will retract fully and easily once you get the motion down. The back is black and very opaque. I mounted my screen on removable ceiling brackets, but it looks so good that I rarely take it down. In the future, I may build a freestanding frame so I can use it outside on occasion. Summer movies on the rooftop anyone Projecting on a screen as opposed to projecting on a wall makes a BIG difference as many have attested. My movies look more crisp and the colors look more vibrant not washed out. They look almost as good in the daytime as they do at night. The screen is matte white as described. The screen is perfectly smooth and free of rumples. My screen in particular has a little red speckle in an inconspicuous area of the screen nothing a little whiteout cant fix but is otherwise cosmetically perfect. The screen is made in the USA. Woohoo! The screen does not come with hardware for mounting it to a wall or ceiling. <http://www.tercovci.cz/files/business-home-gsm-alarm-system-manual-espa-ol.xml>

- 1.0.

It does have a hole in the back on each end for wall mounting and a ring on each end for mounting on Impede the retraction just enough especially towards the end of its run so the end of the screen doesn't slam into the housing at full speed. So, STOP projecting on a wall. At the current price just over 50, it's well worth the investment! As the other reviews have stated, the screen does not come with any mounting hardware. You'll need your own screws wall installation or hooks ceiling installation in order to install it. If you are installing it on a home ceiling, swag hooks like you would use for a hanging plant will work. On the wall you'll need to find studs or use sturdy drywall anchors. Installation should be easy and intuitive once you see the unit, and regardless of installation method it is easy to take the screen down and store it if you would like to. The screen seems high quality, however I am admittedly not a screen connoisseur. It is definitely better than using a bare wall. The screen does stink like chemicals when it is down, enough to smell it in a large room. I suspect that smell will go away with time. My only complaint is that it's not the easiest to get the screen back up. It doesn't seem like it should be rocket science like any other type of pull shade you pull down and allow it to go back up, but this screen doesn't work that way. I can use the same technique over and over again and sometimes it works and sometimes it doesn't. It's a mystery. It shouldn't be. The price with free shipping simply cannot be beat. I am happy with my purchase and would recommend it to others. In order to navigate out of this carousel please use your heading shortcut key to navigate to the next or previous heading. A few things to know. This version is meant to be mounted on a wall or ceiling, it is not freestanding. I was looking for the former, so I was totally satisfied. It's pretty light. I assure you it will retract fully and easily once you get the motion down. The back is black and very opaque. I mounted my screen on removable ceiling brackets, but it looks so good that I rarely take it down. In the future, I may build a freestanding frame so I can use it outside on occasion. Summer movies on the rooftop anyone Reviewed in the United States on May 30, 2012 I've had two of these screens. Both of them were okay, but I've had two gripes 1 The retraction instructions are a bit unclear. The label on the handle makes it sound like you have to pull the screen all the way down, but in fact it's a fast, sharp pull that causes it to go into retract mode. It's annoying. 2 Both screens I received had ripples that caused the image to distort somewhat. Please try again later. From the United States When this one came up on Amazon I thought there must be something wrong with it, but after some research it was actually a pretty respectable model. It doesnt seem like it should be rocket science like any other type of pull shade you pull down and allow it to go back up, but this screen doesnt work that way. I can use the same technique over and over again and sometimes it works and sometimes it doesnt. Its a mystery. It shouldnt be. The price with free shipping simply cannot be beat. I am happy with my purchase and would recommend it to others. Please try again later. Please try again later. WakkyWabbit 5.0 out of 5 stars The metal is much heavier duty than the screens I found locally. This applies to all the parts. Important areas, like those for hanging are also heavy duty. Item is about 15 pounds. A string pull is included but I am not using it. The screen itself is white with a black border, possibly black felt. New item smell is potent at first. No part of this item appears cheaply nor poorly constructed. Pulls down and retracts smoothly. There is nothing fancy about this item. Plain white painted metal, no logos, no stickers, no racing strips. Plain and simple. Its not pretty, its just well made. I find that a major selling point in most items. Installation was fairly easy. I needed a drill, extra sturdy screw hooks like for hanging plants from the ceiling, they look like a big question mark, and a step ladder. I was able to hang this myself in a few minutes. If not, you will probably regret it. Projecting on a wall is ok but a screen makes a huge difference in picture quality. DaLite has exceeded all my expectations. It is a high quality item at an unbelievably low price. I have never had a movie fill up the screen from top to bottom but I often have movies go from edge to edge. I will probably purchase a second screen for upstairs because moving the screen, although not too difficult, is not something I prefer to do.

Basically, you just lift it off the hooks and move it, reset it on other hooks in new room. Make sure it is level. Please try again later. Please try again later. Dave C 5.

0 out of 5 stars The quality of the screen itself is way better than I expected and it would have a great home over a window to help block out some light, since the back of the screen is coated with a light dispersing material. The packaging wasn't great like everyone says, it comes in a box with a couple pieces of foam to protect it, but it could be better. Luckily mine came out of the box perfect, and without a scratch, I'd buy more of these if I had more projectors. I may not upgrade for another year or so. Please try again later. Please try again later. Samplerman 5.0 out of 5 stars It just arrived today. I set it up in my storeroom so I could run the ozone machine on it to get rid of the smell of latex. However, it wouldn't stay down, just wanted to retract. Here's a little tip I learned from my past: I used to rebuild movie screens for school systems. Set the retracted screen closed position on a table and take a hammer and lightly I said LIGHTLY tap on the plastic cap ends of the screen a few times. It worked perfectly for me and now it pulls down and stays. Everything is fine. You can't beat this price and the quality is first class. DaLite rocks the projection world. Please try again later. Please try again later. I'm not the greatest with tools and was a little concerned about mounting a screen on drywall. But given the price I said what the heck and took a chance. I didn't rush and took my time measuring and positioning the screen before installing the wall anchors. I took about 19.5 minutes for this, but once that was done installing the wall anchors and mounting the screen took maybe 2 minutes and I got it right the first time!. It is a BIG improvement over the flat white paint wall. Please try again later. Please try again later. Z. Richardson 4.0 out of 5 stars A little too big for my projector setup, actually. It was easy enough to install with just a screwdriver, a stud finder and a level.

<http://cydistribution.com/images/Deutz-Repair-Manual.pdf>

Mine seems to be wrinkling a bit, developing the slightest waves in the picture, though that might just be because I leave it hanging all the time and don't roll it back up. Of course, I only do this because it's initially a nightmare to get it to go back in. The few first times I've tried to adjust it I became extremely frustrated. I think I'm getting better at it, though. The trick is to keep constant tension in the screen when you pull down and let it go back up at a constant speed. You have to be extremely smooth while doing this or the screen will catch and you'll have to try a couple of times before you can get it to roll back up again. Anyway, as I've said in the title it's a serviceable screen and when you consider the price it becomes a pretty darn good one. Please try again later. Please try again later. Alaric L. Tin 5.0 out of 5 stars I took a gamble and bought it anyway. Boy am I pleased. I experience no negative quality issues. I installed it for our Worship services. I think the original plastic brackets would be sufficient but I prefer steel. I recommend this product, if you're looking for quality that will not break the bank. Please try again later. Please try again later. R. M. Hutchins 5.0 out of 5 stars I used to have a white sheet which I mounted on some PVC pipe which someone had recommended for a poor man's movie screen. It was a hassle to set up, and the sheet and, thus, the picture was, often, wrinkled. This screen came ready to go. I just mounted it to the top of my Kmart special entertainment center. Now, I just walk up and pull the screen down, and I am ready to go. The screen is a good size 6 x 6 for my family room. I've had it a couple of weeks, and I've used it about 10 times. My wife commented on how much better it is than what we used to have. I suppose you could pay more for a screen, but I don't see how it could be any better. Please try again later. Please try again later.

Jersey Girl 5.0 out of 5 stars Now we can sit on the sofa and watch movies on a big screen. Bought a 3M Roku projector, which works great at projecting movies and cable TV on the screen. This screen is 50 inches wide and although some have commented that it could be bigger, it works fine for our purpose. There is a black 1.25 inch border on each side, which actually makes the white screen 47.5 wide. Nice quality for the price.The screen has a solid feel and classy look in the cream color. Mounting took about 10 minutes and includes wall and ceiling. We are using the ceiling hooks and due to the solidness of it, is very stable.

I was impressed with the brightness of the screen with the projected image at 1080i and at 720p as well as the viewing angle was quite good. As with all screens I have used it can be a bit tricky to get it retract when only partially deployed. For the money and Amazon Prime this is an excellent choice both in quality and price.Projected image looks great on the screen. No complaints thus farI use for short presentation and home movie viewing. Brilliant. Easy setup and usage always.The screen is a nice matte white and my projector looks very nice on the screen. With a gentle pull on the enclosed cord, the screen rolls down smoothly and retracts with the same ease. This wonderfully functional and affordable screen is just the solution for a schoolroom, office seminar room, library or university setting. With a gentle pull on the enclosed cord, the screen rolls down smoothly and retracts with the same ease. Dalite, a morethanknown name in the audiovisual field, has screens for every projection environment and office need.
